User Story Development & Prioritization

Stakeholder Needs & Derived Features

Project Context

- Establishment of a centralized, university-specific forum to enhance student-administration communication

Key Stakeholder Needs

- A safe discussion platform
- Anonymous participation
- Post and reply upvotes and downvotes
- Efficient management & moderation of content
- Personalized interaction

Derived Features

- User Authentication
- Post & Comment System
- Moderation Tools
- Voting Mechanism
- Anonymous Posting
- Issue Reporting Forum
- Profile Customization

Prioritized User Stories

Authentication and Login

As a student,
I want to log into the platform using my credentials so that I
can securely access and interact with discussions.

- **Priority:** Must
- **Justification:** Foundational requirement; all other features depend on secure access control.

Post and Comment System

As a student,
I want to create posts and add comments under topics
so that I can ask questions and share ideas.

- **Priority:** Must
- **Justification:** Core engagement mechanism; enables the main functionality of the platform.

Prioritized User Stories

Voting Mechanism

As a student,
I want to upvote or downvote posts and comments
so that quality contributions are surfaced and spam
is discouraged.

- **Priority:** Must
- **Justification:** Encourages relevant content and community-driven moderation.

Moderation Tools

As a moderator,
I want to view, hide, and delete inappropriate
content so that I can ensure a respectful and safe
community environment.

- **Priority:** Must
- **Justification:** Essential for maintaining the integrity of content and platform standards.

Prioritized User Stories

Digest-Style Notifications

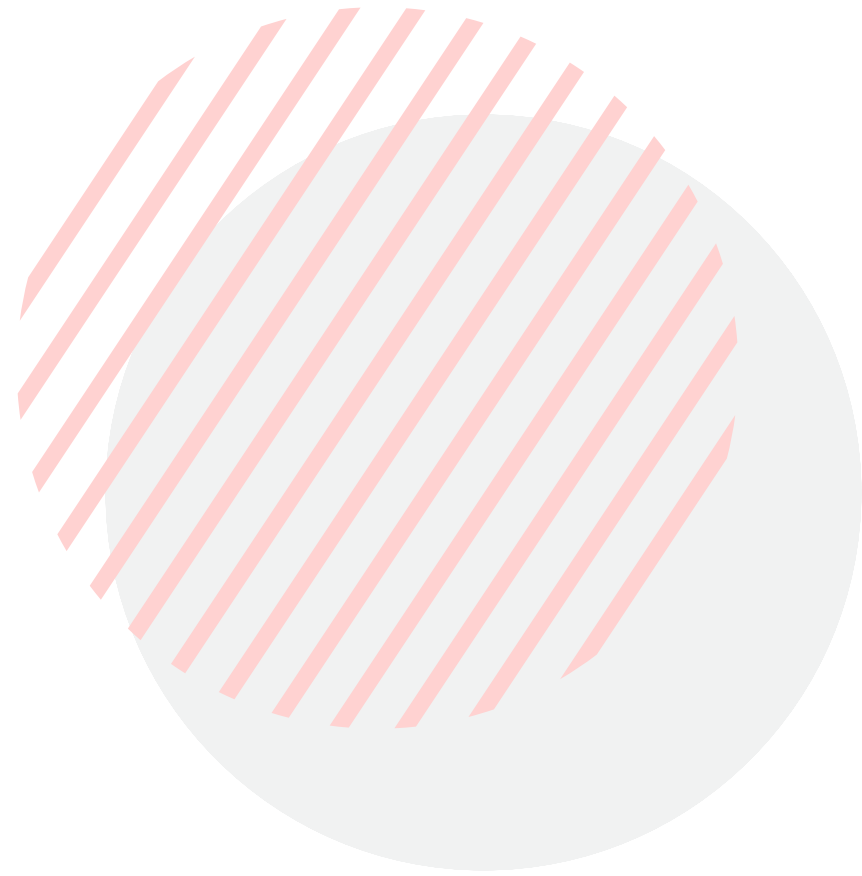

As a user,
I want to receive periodic email summaries of new posts so that I stay updated without being overwhelmed.

- **Priority:** Should
- **Justification:** Enhances user engagement without causing notification fatigue.

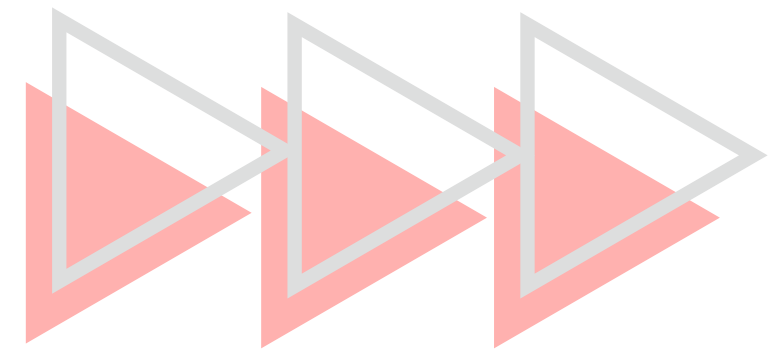

Profile Customization

As a user,
I want to personalize my profile with an avatar and bio so that others can understand my background and interests.

- **Priority:** Could
- **Justification:** Improves user identity and connection, but not critical to platform functionality.

Prototype

Prototype

Type
Non-operational Interactive
UI

Selected Features

- User Authentication & Login
- Voting System
- Post and Comment System

Prototype Demonstration in Figma

Agile Planning Simulation

Agile Planning - Scrum Roles

Development Team Member

Product Owner

Scrum Master

Assigned Member: Alfi Shahrin

Justification:

- Experienced with technical documentation
- Handled UI sketches

Assigned Member: Nayeemul Hasan Prince

Justification:

- Efficient in coordinating past labs and task schedules
- Ensures sprint discipline

Assigned Member: Sadman Shaharier Mahim

Justification:

- Led stakeholder data collection and interviews in Labs 5–6
- Deeply understands system requirements

Product Backlog Table

User Benefitted	Task based on user story	Priority	Size Estimate
Student	Authentication and login	Must	M
Student	Post and comment system	Must	M
Moderator	Moderation tools	Must	L
Student	Voting Mechanism	Must	S
All	Digest-Style notifications	Should	M
All	Profile customization	Could	S

Sprint Planning (2 Weeks)

User stories for first sprint

1. Authentication & Login
(Enables access control and is required before any user interaction can occur)

3. Post & Comment System
(Essential for user interaction and is connected with voting mechanism, better to implement both in one go)

2. Voting Mechanism
(Small in size and adds immediate value to user engagement)

Agile vs Structured Reflection

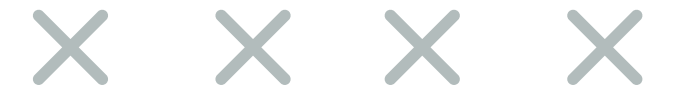

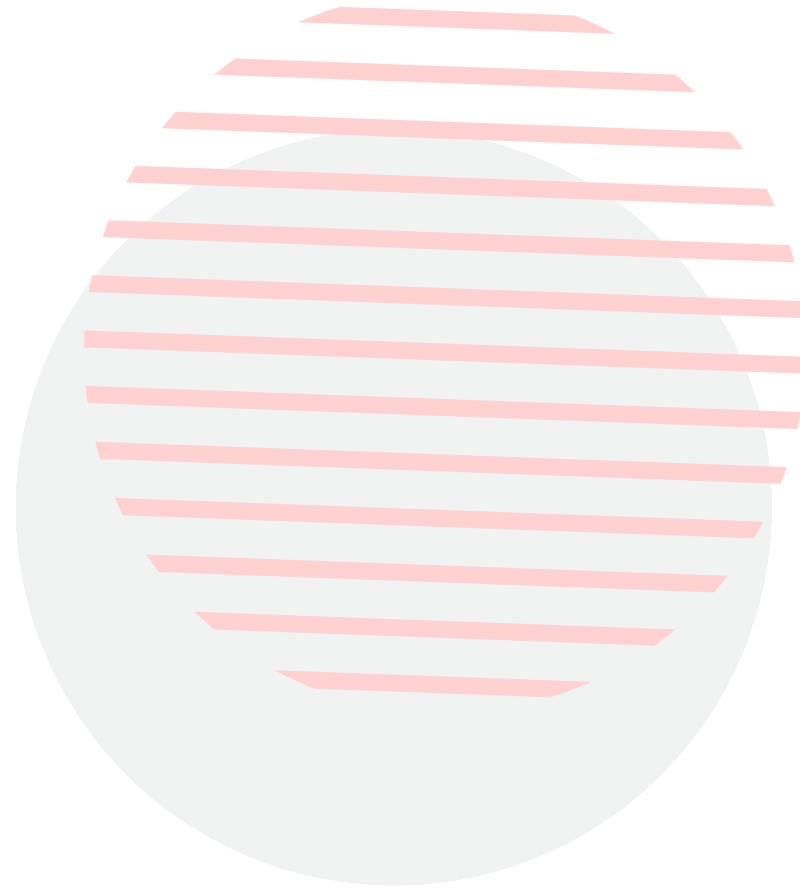

Agile vs SDLC Reflection

Aspect	Agile (Selected Approach)	SDLC (Alternative)
Requirements	Evolved via feedback and observation; flexible during sprints	Fully defined up front; hard to adjust later
User Involvement	External information sources	Primarily at milestone reviews; limited engagement
Flexibility	High, quickly added anonymity and voting features	Low, changes require formal process
Delivery Speed	MVP (login, post, vote) built in Sprint 1	Delivery after full cycle; no early MVP
Project-Specific Fit	Suits our dynamic goals and IUT's feedback-friendly culture	Not ideal for evolving, user-driven platforms
Documentation	Light and evolving; focuses on backlog	Heavy upfront; formal specs required before development

Agile vs SDLC Reflection

Conclusion

- Agile helped us prioritize core features and quickly deliver an MVP aligned with evolving stakeholder needs.
- Continuous feedback and sprint-based flexibility made Agile a better fit than SDLC for our dynamic, student-centered platform.
- IUTian Threads benefited from Agile's adaptability, allowing us to refine goals without heavy upfront planning.

Thank you!

We are open for Q&A
